

Safe and versatile scaffolding range from WIBE LADDERS

WIBE LADDERS launches a complete, in-house developed scaffolding range. From start to finish, the development process has focused on the needs and requests of the craftsmen and scaffold builders. Now it's easier to assemble the scaffolding in all weather conditions, and safer than ever to work at height.

Rolling towers must be safe to climb up in and to work from. When WIBE LADDERS developed the new scaffolding range they did not only want to meet the legal requirements; they wanted to design flexible towers that craftsmen enjoy using. Extensive user analysis indicated that scaffolding was considered complicated to assemble and had design flaws that affect the craftsmen's work environment. .

Now WIBE LADDERS launches a range of rolling towers that are simple to build in all weather conditions, and easy to assemble even after several years' worth of ware.

"The craftsmen clearly told us that they wanted equipment that is easy to assemble. Braces that don't fit properly and cranky frames are inconvenient, and they did not want new features that cause problems. That's why we decided to make a robust construction, and developed a unique locking clamp with a generous ergonomic two-finger grip to allow the user to exert greater force during assembly, even with the winter gloves on," says Robert Agerskog, Product Manager.

Clever new solutions designed to have a positive impact on the craftsmen's work environment include overlapping bracing and sturdy wheels with optimised connection to the frame to avoid movement of the scaffolding. Colour coded supporting legs reduces the risk of tripping and colour coded braces simplifies scaffolding assembly. Cushioned side profiles are easy to grip.

"Scaffolding is rarely displayed in stores, and it is therefore difficult to compare one model with another. We had our sales team climb up in both our own and in our competitors' scaffolding to experience the difference. We are proud to have designed scaffolds that are manageable and that offer the craftsmen solid ground even at heights," says Robert Agerskog.

WIBE LADDERS' new scaffolding range consists of four rolling towers including one stairway tower and one smaller trade scaffolding. The stairway tower is a good choice for work sites where craftsmen have to carry heavy equipment and materials with them. Naturally, the scaffolding range is tested and approved according to EN1004, Load class 3.

"Our new scaffolding range takes scaffolding to the next level. Now we have a selection of stable and functional scaffold towers that are simple to assemble and that minimise the risk of accidents for craftsmen who work at height. It's all the little details that together make the difference, says Robert Agerskog.

HULTAFORS GROUP
IN EVERY WAY, A PARTNER TO RELY ON
