

This spring's hottest two-wheeler

Wibe Ladders has launched a new work platform, the CMP, which stands for Compact Mobile Platform. And that's exactly what it is, a compact work platform designed for craftsmen who frequently move around, on, or between work sites. Besides the yellow railings the platform may look like many other work platforms on the market, but Product Manager Robert Agerskog says that once you work with it, you'll notice the difference. The development work has focused much on the small details that make it easy to handle. The design of the guard rail allows you to roll it through a doorway without hitting the top of the door frame. The side of the frame lean inwards for greater stability and on the entrance side the extruding base reduces the risk of tipping over. The steps on the rungs make the climb safer and more comfortable and the top platform support is open so you do not have to climb over it when accessing the platform.

The design, weighing in at 24 kg, consists of a steel frame, a large platform, two yellow railings and a lot of smart solutions meant to make your life a little easier. With only four parts it's easy to assemble and disassemble and during transportation all the parts can easily be fixed to the frame. The two puncture-proof wheels make it easy to roll around, both assembled and when folded together. The plywood platform with a non-slip mesh pattern measures 1200 x 440 mm and can be placed at four heights between 440 mm and 1260 mm.

"It is a product aimed specifically at craftsmen who need something that is easy to use, but still want a large and stable platform to work from," says product manager Robert Agerskog. "If you change location frequently, need to get through doorways or work in tight spaces, this is a perfect product. We have tried to look at all the different aspects of the use; transport, assembly, climbing and of course the working phase, and we have tried to simplify as much as possible for the user at every stage"

Wibe Ladders CMP in brief:

- Compact design, the chamfer on the railings and two puncture-proof wheels make it very easy to move around the workplace.
 - Flared base, deep steps and an open rung at the top makes it stable and comfortable both to climb and to work on.
 - When folded together, all the parts can be fixed to the frame for easy transport.
 - Platform measuring 440 x 1200 mm and can be placed at heights of 440, 690, 980 & 1260 mm.
-
